

Partial local-config scan

Method: local-config-only. liveVcIntercept: false. Generated 2026-08-24T15:39:18Z.

Trees: /workspace/book, /workspace/grok-export, /workspace (json / md / yaml). Deduplicated 17-19 digit IDs near the word discord.

This file lists Discord snowflake IDs already on this computer or in conversation memory. It does not join channels, scrape live VC membership, or run a criminal lookup.

Records found: 1 (deduplicated)

USER SNOWFLAKE

1409675616155992214

label: querlor / freeus path: memory created: 2025-08-25T23:07Z

Source: conversation/memory, not live VC. Decoded Discord epoch ~ 2025-08-25T23:07:37.398Z.

What was scanned

- 191 json/md/yml files walked. Word discord in 3 files (this scan md, RED-baseline-notes.md, grok-export).
- 1409675616155992214 is not on disk in grok-export or other configs; included from prior work as required.
- prod-grok-backend.json has 676 discord hits and many 17-19 digit IDs; those IDs are X/TikTok/Facebook/etc URLs, not Discord snowflakes — excluded.
- RED-baseline-notes.md mentions Discord bots; no snowflake IDs.
- Scan is partial: no additional Discord user/guild/channel snowflakes in local json/md/yml.
- Not emailed. Companions: discord-id-config-scan.md and discord-id-config-scan.xml.
